Technical Data

EUROBINDER 611

Area of application	Eurobinder 611 preparation of proteic substances, waxes and additives
Application	Eurobinder 611 is a auxiliary suitable for basecoats, specifically used to give an excellent filling and matt effect to the finish. It improves pate release and the embossing properties of the leather. Eurobinder 611 is used in combination with other auxiliaries, in split finishes for upholstery and shoe leather. Best results are achieved when applying it only in the first base coats. It is used at a concentration of 10 % according to the weight of the binders. Particularly with dark colours, higher percentages could cause greying. We advise against its use in low viscosity (below 30 "TF/4) or solvent based finish systems.
Physical form	Off – white paste.
Characteristics	Composition: polymers in a proteic binder Dry residue: 17 % approx. pH (1:10 with water): 8 approx.
Safety and Storage	Stir well before use and close recipients tightly after each withdrawal. Store at a temperature between + 5 °C and + 40 °C When stored under these conditions, this product has a shelf life of at least six months.
Origin	European Community
